

October 2019

Position as Student Assistant (HiWi) for Machine Learning, Natural Language Processing, and/or Semantic Web Technologies

(Spoken Language: English or German)

We are looking for students who assist us in performing research in the research areas of machine learning, natural language processing, and Semantic Web.

What are the typical tasks?

- Implementing – under our guidance – novel scientific approaches and demonstration systems (e.g., semantic search systems, recommender systems in combination with knowledge graphs), and creating new data sets for the scientific community.
- Running existing software for building up knowledge graphs, performing information extraction on texts, evaluating neural networks, recommending publications for reading or citing, ...
- Perform data analysis, e.g., on RDF knowledge graphs (DBpedia, Wikidata, ...).

What prerequisites do you need?

- You have fun with working with data, using methods and techniques from machine learning, text mining, data science, etc.
- You are interested in state-of-the-art research on machine learning, natural language processing, and/or Semantic Web technologies.
- You have at least basic programming skills (e.g., Python).

What do we offer for you?

- A contract with 40-85h per month. The salary is about 11€/h (depending on the university degree). The contract can last between 3 and 9 months (option for extension).
- Flexible working hours, also working at home possible.
- A variety of tasks so that you can learn a lot. Also state-of-the-art research can be performed and will be published together with the student.
- If the student likes the work, it can be extended in the form of a Bachelor/Master thesis.

Starting date: As soon as possible. Also later applications (in some months) are welcome.

Please send your questions and application
(with a short CV and a transcript of records) to:
